

AXLE WEIGHING

Overloading a vehicle, whether a goods vehicle, Passenger Service Vehicle or car, is not only dangerous but illegal. Both driver and operator of overloaded vehicles can be prosecuted receiving penalty points, fines and even disqualification and withdrawal of operator licences if the vehicle is found to be 'overloaded'.

Overloading a vehicle:

- » Makes it unstable, difficult to steer and increases braking distances
- » Puts massive strain and wear on vehicle tyres
- » Means insurance cover is void
- » Increases fuel consumption

To ensure your vehicles are never overloaded you need to know the weights of your vehicles at all times, whatever the load...

Our axle weighing solutions will allow you to ensure your vehicles are able to run at optimum weight guaranteeing maximum safety, economy and efficiency while always remaining within legal limits.

We have a range of solutions with installation, repair and maintenance services to suit most rigid body commercial vehicles with in the cab displays to ensure clarity and ease of use.
